***“Finding infected patients and preventing the transmission are two important steps in viral hepatitis elimination”***

“NOhep” is a global movement to eliminate viral hepatitis from the world by 2030 and Iran Hepatitis Network as a member of World Hepatitis Alliance (WHA) follows the NOhep activities in Iran. Fortunately, Iran has the lowest prevalence rate of viral hepatitis compared to the other Middle East countries. This low prevalence gave us the opportunity of eliminating viral hepatitis from Iran sooner than other countries of our region. But one of the main problems is finding infected patients. Most of viral hepatitis infected cases are asymptomatic and unknown. We need to find infected patients and link them to the treatment. Therefore, all people should know about hepatitis to prevent them and help eliminating these diseases.

In this regard, Iran Hepatitis Network held the **1<sup>st</sup> Drawing & Illustration Contest** with the theme of eliminating viral hepatitis to take more effective steps to create a culture of hepatitis awareness. This awareness will help finding unknown infected cases and preventing the transmission of viral hepatitis. So, it could facilitate removing of viral hepatitis from our community.

### **Seyed Moayed Alavian MD**

Professor in Gastroenterology and Liver Diseases

Director of Iran Hepatitis Network

***“Removing one of the main barriers for viral hepatitis elimination programs in Iran; lack of enough knowledge”***

The World Health Organization sets the goal of viral hepatitis elimination by year 2030. Reaching this important goal seems to be impossible without raising the knowledge of general population about viral hepatitis. Unfortunately, our studies showed a lack of enough knowledge regarding viral hepatitis in Iran. All people should know about the transmission routes of viral hepatitis to prevent transmission, their symptoms and risk factors to find unknown infected cases, and the importance of viral hepatitis elimination programs to facilitate reaching this goal. Holding such festivals and campaigns can raise the general concern about this important issue, help people to know more about viral hepatitis, and facilitate the viral hepatitis elimination programs.

***“Art and artists can help viral hepatitis elimination programs”***

Over the last decades, one of the most important health problems which has affected the health of millions of people annually and has led to their morbidity and mortality has been viral hepatitis. Since one of the main causes of viral hepatitis is related to the lack of awareness about their transmission ways, a decision based upon holding the **1<sup>st</sup> Drawing and Illustration Contest** with the theme of eliminating hepatitis was made in order to take more effective steps to create a culture of hepatitis awareness. This contest is aimed at making people aware of transmission, prevention, and treatment of viral hepatitis.

Therefore viral hepatitis could not be eliminated without raising the concern about them among general population. We know art and artists can be effective regarding this important issue in our community. It is hoped that holding such festivals can help improving the level of community awareness and concern about these diseases.

Such festivals could also remove the stigma and false believes about viral hepatitis as the barriers for their elimination programs.

# Hope Health Club

Hope Health Club is a non-governmental organization (NGO) which seeks a healthy lifestyle for people all over the world. The main goal of this foundation is to promote liver health and reduce the burden of liver diseases by providing support for research and education into the causes, diagnoses, prevention and treatment of liver diseases. This foundation was founded by Prof. Seyed-Moayed Alavian, Professor of Gastroenterology and liver disease and editor-in-chief of the hepatitis monthly journal, the only specialized journal pertaining to liver disease in the Middle East and central Asia in 2015.

This foundation tries to supply comprehensive educational materials covering the signs, symptoms and treatment of many of the prevalent forms of the liver disease as well as variety of helpful tips on precautions or healthy choices that can help people to preserve from liver diseases. The information provided here is profitable for those living with or at the risk of liver diseases and the health care professionals who care for them.

High public awareness occurs when a significant proportion of society agrees that the having a healthy lifestyle is an issue that is of great importance to all citizens. Low public awareness occurs when a majority of people do not know or do not care about their healthy. Therefore, one of the purposes of Hope Health Club is to raise public awareness about health issues in general and liver diseases in particular.

In order to reach this goal, Hope Health Club attempts to hold public conferences by the name of “Omid” and with the cooperation of other organisms and NGOs. It is notable that thanks to the people’s warm reception, 9 Omid conferences have been held up to now. Among this foundation’s activities, the election of 8 Health Ambassadors among prominent faces like actors, directors, doctors and those who care about health issue is noteworthy. For instance, Mr. Jamshid Mashayekhi as a prominent Iranian actor received the statue and certificate of Health Ambassador this year. These ambassadors attempt to motivate people to exercise more, eat less unhealthy foods and forbid young people from starting smoking.
